

NIVS Update – Additional Functionality Updates for Release on 27th January 2021

Dear Colleagues

Following some further development work, we can now confirm that we are making some additional functional changes to NIVS in line with the programs requirements.

Selecting a vaccinating organisation.

To support the flexible approach to rolling out mass vaccination sites, NIVS has been adapted to ensure that this can be recorded effectively.

There is no longer a requirement to select a Vaccination Service Type, just an Organisation and Site. The site selected will determine if the vaccinations are being undertaken in a Hospital Hub of Mass Vaccination Centre.

Organisation

Solent NHS Trust

Site

Oakley Road - Mass Vaccination Centre

Oakley Road - Hospital Hub

Basingstoke Fire Station

Hamble House, St James Hospital Site

Riverside Leisure Park

irm

Changes to Patient Registrations

1. The application now no longer requires an NHS Number and DOB to do an NHS Number Search.
2. The application requires the users to search for the patient to return the patients demographic details. A valid record must be returned from that search to enable users to continue to record the vaccine. The application has a live link to the Patient Demographic Service and as such all NHS Numbers and relevant Demographics details held there. Where an nhs number is unable to be found, a local record of the vaccination should be retained.
