

NIVS Update – February 10th 2021

Dear Colleagues

Please see details of this week's release. The NIVS Team have been focussing on the extract facility, to enable you to review the data you have entered. Alongside an increase in the extracts, we have ensured that all the data sets have been changed to reflect the front-end changes, so you will be able to extract all of your data including:

- Additional Monitoring Data
- Pre-Screening Data
- Additional Data on vaccination screen.

A summary of each extract and how they are derived is below. Extracts are only accessible by those users approved by the SPOC in your organisation and the data you can access is based upon the organisation you are registered with in OKTA. If you registered as South Warwickshire Foundation Trust as your organisation, all data is filtered upon that organisation.

EXTRACTS: Select you extract from one of the list below:

This extracts all vaccinations for staff who have been identified as being employed by your organisation at the time of registration. The extract will identify all staff whose vaccinations have been recorded on NIVS, even if the vaccination was done within another organisation providing vaccine services, again as long as they are recording this on NIVS. If your organisation is not vaccinating, then you can still use NIVS to review this data.

All Vaccination recorded for your organisation:

This report extracts all patient whom your organisation has vaccinated. As part of the vaccination record, the code of the vaccinating organisation is recorded. This is based upon the organisation selected prior to the session for vaccinating. You can either select all (ANY DATE) or select a filtered list based on the patient vaccination date. This data set has the extended detail for all the data recorded against their vaccination.

Extract Type Due Date From Due Date To

Patients due a second dose dd/mm/yyyy dd/mm/yyyy Any Date [Download](#)

Patients with a pre-screening and no vaccination

This extract exports all patients who have had a pre-screening recorded, however have not had a vaccination record completed. This allows the organisation to either highlight records that need a vaccination record completing or to identify records that may have been entered in error. The new Super User functionality can delete these records if required.

Download Extract

Extract Type Prescreening Date From Prescreening Date To

Patients with a pre-screening and no vaccination dd/mm/yyyy dd/mm/yyyy Any Date [Download](#)

Patients with multiple vaccinations on the same day

The extracts purpose is to support organisations to identify possible duplicate vaccination records. The organisation can identify if they are duplicate and pass to the Super User in the organisation who has the capability within that role to delete the duplicate. NB, only vaccinations with no Adverse Reactions recorded can be deleted.

Patients without any activity

A recent audit of the system identified 26,000 patients registered into NIVS who do not have any vaccination or pre-screening records. The purpose of this extract is to identify these records so the Trust can review these. The Super User role can then delete these patients as required.
