

NIVS Release 14th February

Dear colleagues, a new functional release of NIVS today to add some new functionality to the application.

This functionality allows you to search for patients and view their vaccination history without the need to do a full patient registration. The functionality still requires a successful match to PDS to enable the system to bring back the correct prior vaccination details. This functionality was requested for those services who are working in clinical settings with vulnerable patients, who want to offer the vaccination to patients using their service.

Immunisation Status Search

As with patient registrations, either enter the NHS Number or the Patients Demographic Details. A match to PDS is required, as the NHS Number is needed to pull back prior vaccination data from the national data repository in NIMS.

Immunisation Status Search

NHS Number

Forename Surname Date Of Birth Gender Postcode

If a successful match is made, the up to date details in the national data are made available, as you will have been using in both the Pre-Screening and Vaccination Screens. If the patient is unknown in NIVS then you can proceed from this page by using the ADD PATIENT button.

AUDIT:

As with every add, edit or delete in a patient record, every search records an audit log of the user searching, the date and timestamp of that search as well as the NHS Number of the patient searched for.
